I am wishing to take up a fulltime position in the capacity of a senior backend/frontend developer, software engineer. My area of expertise enables me to design, create and optimise big applications and complex backend systems, thus I would be interested in handling this kind of assignments.

I can work both independently, without being micromanaged at every step, as well as in a team. I also possess significant team lead skills, I am able to delegate and execute tasks and allocate work on ongoing basis. I have proven experience in prioritising, coordinating activities and delivering to tight deadlines.

For the last nine years I have been developing web applications, involving mostly PHP, MySQL and JavaScript (not to mention the obvious HTML ones). I also possess a sound working knowledge of responsive design, followed by intense practice in the field.

Apart from creating websites for small and medium size companies I took part in developing finances and accountancy related applications, and SEO. I had many opportunities to work with jQuery library, Kohana and Symfony 2 frameworks and CMS like my absolute favourite Drupal. When it comes to ecommerce, I have designed and developed several platforms Magento Community and Prestashop based. I have experience in designing and testing software like PHPUnit, Jenkins or Phing (CI/DI) and Docker. I am also familiar with design patterns.
